DETAILED ACTION

Restriction/Election

- 1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
- Group I. Claims 1-5, 7, drawn to a method for the differential-diagnostic early detection and detection of a pro-gastric-releasing peptide (proGRP), classified in class 435, subclass 7.1.
- Group II. Claims 1-5, 7, drawn to a method for the differential-diagnostic early detection and detection of a pro-endothelin-1 peptide (proEND), classified in class 435, subclass 7.1.
- Group III. Claims 1-5, 7, drawn to a method for the differential-diagnostic early detection and detection of a pro-brain-natriuretic peptide (pro-BNP), classified in class 435, subclass 7.1.
- Group IV. Claims 1-5, 7, drawn to a method for the differential-diagnostic early detection and detection of a pro-atrial-natriuretic peptide (proANP or pro-ANF), classified in class 435, subclass 7.1.
- Group V. Claims 1-5, 7, drawn to a method for the differential-diagnostic early detection and detection of a pro-leptin, classified in class 435, subclass 7.1.
- Group VI. Claims 1-5, 7, drawn to a method for the differential-diagnostic early detection and detection of a pro-neuropeptide-Y, classified in class 435, subclass 7.1.
- Group VII. Claims 1-5, 7, drawn to a method for the differential-diagnostic early detection and detection of a pro-somatostatin, classified in class 435, subclass 7.1.

Application/Control Number: 10/808,368

Art Unit: 1646

Group VIII. Claims 1-5, 7, drawn to a method for the differential-diagnostic early detection and detection of a pro-neuropeptide-YY, classified in class 435, subclass 7.1.

Group IX. Claims 1-5, 7, drawn to a method for the differential-diagnostic early detection and detection of a pro-adrenomedullin (pro-ADM), classified in class 435, subclass 7.1.

Group X. Claim 6, drawn to a method for the differential-diagnostic early detection of dipeptidyl-peptidase IV, classified in class 435, subclass 7.1.

*These claims 1-5, 7, embrace multiple patentably distinct embodiments.

The inventions are distinct, each from the other because of the following reasons:

Inventions I-X are independent and distinct, each from the other, because the methods are practiced with materially different products which are structurally and chemically different, the novelty of the inventions lying in the products being detected and not the processes. The only feature in common in the instant inventions is "a method for the differential-diagnostic early detection", which does not constitute the special technical feature lacking from the prior art because this method can be used with a composition other than the instant products such as IL-1. Distinctness is further shown because each of these products in each method can be made and used without any one or more of the other products. The products to be detected in the different Groups are physically, chemically and biologically distinct from each other, and if patentable would support separate patents. Furthermore, separate search terms would be required for searching the literature, eg. a search of the literature for an association of pro-GRP with sepsis would not necessarily reveal art for an association of pro-ADM with sepsis. Similarly, a search

Application/Control Number: 10/808,368

Art Unit: 1646

of the literature with any of pro-END, pro-BNP, pro-ANF or pro-leptin would not necessarily reveal art for an association of pro-GRP with sepsis.

Having shown that these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their recognized divergent subject matter as defined by MPEP § 808.02, the Examiner has *prima facie* shown a serious burden of search (see MPEP § 803). Therefore, an initial requirement of restriction for examination purposes as indicated is proper.

Applicant is advised that the response to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 C.F.R. § 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a diligently-filed petition under 37 C.F.R. § 1.48(b) and by the fee required under 37 C.F.R. § 1.17(h).

Advisory Information

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Prema Mertz whose telephone number is (571) 272-0876. The examiner can normally be reached on Monday-Friday from 7:00AM to 3:30PM (Eastern time).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Gary Nickol, can be reached on (571) 272-0835.

Official papers filed by fax should be directed to (571) 273-8300. Faxed draft or informal communications with the examiner should be directed to (571) 273-0876.

Information regarding the status of an application may be obtained from the Patent application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR
